

Pre-Production Challenge

Code Design from Flow Chart

Sean Morrow

PROG1102 Introduction to Programming : Python

CHALLENGE!

Take a look at the provided Python application (flowChartToCode.py) and note that it includes two Lists, one populated with integers and one that is empty:

```
startData = [100, 2, 323, 66, 65, 67, 99, 27, 212, 8]  
sortedData = []
```

Using this application as a starting point, implement the following algorithm outlined in this flow chart...What does this algorithm do?
